

Name Madhulata Mukkamala

Project: Task 3 (financial Dataset)

TOOL- Power BI

Summary and Overview Report of the Task

1. Core KPIs (matching BRD's 5 main KPIs)

- **Total Amount:** ₹45.61 Cr (₹456,141,514) across 50,069 transactions
- **Total Transactions:** 50,069
- **Average Transaction Value:** ₹9,110
- **Total Fees:** ₹727,094 (0.16% of transaction value — consistent across types)
- **Total Tax:** ₹130,952

2. YoY (using full calendar years only, 2023–2025; 2026 excluded as incomplete):

- 2023: ₹137.30 Cr
- 2024: ₹135.77 Cr (-1.1%)
- 2025: ₹137.69 Cr (+1.4%)

Growth is essentially flat over three years — the business is not scaling transaction value, it's holding steady. That's the single most important headline for leadership.

3. Transaction Health

- **Success rate: 85.4%** (₹389.6 Cr), **Failed: 10.4%** (₹47.5 Cr), **Pending: 4.2%** (₹19.1 Cr)
- A **10.4% failure rate is high** for a financial platform — that's ₹47.5 Cr in attempted volume not completing. Industry benchmarks for digital payment rails are typically 2-5%.
- Failure rate is fairly uniform across channels (ATM 10.9%, Auto Debit 10.8%, POS 10.2%, Branch 10.1%, Mobile App 9.9%, UPI 9.9%, Net Banking 9.6%) — this points to a **systemic issue (e.g., backend processing, risk engine, or account-level problems) rather than a channel-specific one**, since a channel-specific fix wouldn't move the needle much.

4. Customer Segment Contribution

Segment	Amount Share	Fraud Rate
Retail	54.4%	1.24%
Premium	18.5%	1.31%
SME	15.8%	1.29%
Corporate	6.8%	1.34% (highest)
Wealth	4.5%	1.16% (lowest)

Retail dominates volume but Corporate — despite being only 6.8% of value — carries the highest fraud incidence rate, worth a dedicated risk-monitoring visual even though the BRD doesn't currently call one out.

5. Geography & Demographics

- **Top state: Maharashtra (₹6.83 Cr)**, followed by Karnataka (₹5.29 Cr) and Gujarat (₹5.01 Cr) — top 3 states drive ~37% of total volume.
- **Gender split is balanced:** Female ₹23.60 Cr (51.7%) vs Male ₹22.02 Cr (48.3%) — no material skew, so the donut chart will show near-parity rather than a dramatic story.
- **Occupation** is evenly distributed (Freelancer through Salaried all sit within ₹73–81 Cr) — occupation as a filter won't reveal strong segmentation on its own, but is useful cross-cut with segment/state.

6. Transaction Type Profitability

Loan EMI (₹131.1 Cr) and **Transfer (₹120.9 Cr)** dominate volume — together >55% of all transaction value. Fee-to-amount ratio is essentially flat (0.15–0.17%) across all 10 types, meaning **fee structure isn't differentiated by risk or product** — a potential revenue-optimization angle (e.g., no premium pricing on high-value transfers vs. low-value bill payments).

As per Business requirement the data analysis

1. Total Amount

- ₹45.61 Cr (₹456,141,514) across all transactions
- YoY: 2023 → ₹13.73 Cr, 2024 → ₹13.58 Cr (-1.11%), 2025 → ₹13.77 Cr (+1.42%)
- 2026 (Jan–Apr only, the complete portion): ₹3.37 Cr vs ₹4.46 Cr same period 2025 (-24.51%) — flag this to stakeholders as a live concern, not a full-year figure

2. Total Transactions

- 50,069 total
- Yearly volume: 2023: 15,058 | 2024: 15,049 | 2025: 14,964 | 2026 (Jan–Apr): 3,726 vs 4,937 in Jan–Apr 2025 (-24.5%)
- Volume has been essentially flat 2023–2025 (±0.6%), tracking the amount trend closely

3. Average Transaction Value

- ₹9,110.26 overall

4. Total Fees

- ₹7.27 Lakh (₹727,094) — 24 transactions have null fee values, excluded from this sum

5. Total Tax

- ₹1.31 Lakh (₹130,952)

Chart Requirements

1. Total Amount by Month (Line/Area Chart)

Monthly amounts sit in a tight ₹1.02–1.25 Cr band with no strong seasonal spike — July and December are consistently the highest months across 2023–2025 (year-end/holiday-linked bump), February is consistently the lowest (shortest month effect). 2026 drops sharply after April due to the data-completeness issue flagged earlier — recommend capping this chart's date axis at the last complete month.

2. Total Amount by Transaction Status (Donut Chart)

- Success: ₹38.96 Cr (85.40%)
 - Failed: ₹4.75 Cr (10.42%)
 - Pending: ₹1.91 Cr (4.18%)
- A 10.4% failure rate is high for a financial platform and is fairly uniform across channels (9.6%–10.9%), pointing to a systemic cause rather than one weak channel.

3. Total Amount by Customer Segment (Horizontal Bar)

- Retail: ₹24.83 Cr (54.45%)
- Premium: ₹8.45 Cr (18.52%)
- SME: ₹7.20 Cr (15.78%)
- Corporate: ₹3.09 Cr (6.76%)
- Wealth: ₹2.05 Cr (4.48%)

4. Total Amount by State (Horizontal Bar)

Maharashtra ₹6.83 Cr, Karnataka ₹5.29 Cr, Gujarat ₹5.01 Cr, Tamil Nadu ₹4.49 Cr, Uttar Pradesh ₹4.36 Cr, Madhya Pradesh ₹4.10 Cr, Haryana ₹2.57 Cr, Kerala ₹2.43 Cr, Delhi ₹2.35 Cr, West Bengal ₹2.23 Cr, Rajasthan ₹2.21 Cr, Telangana ₹1.90 Cr, Chandigarh ₹1.83 Cr — top 3 states contribute ~37% of total volume.

5. Transaction Type Analysis (Matrix/Heatmap)

Type	Amount (Cr)	Fees	Tax	Count
Loan EMI	13.11	204,699	36,885	9,140
Transfer	12.09	193,315	34,814	8,479
Deposit	6.88	113,096	20,367	4,970
Investment	4.92	80,474	14,488	3,568
Card Payment	2.69	43,231	7,782	5,329

Type	Amount (Cr)	Fees	Tax	Count
Bill Payment	2.18	33,377	6,011	4,310
Withdrawal	2.14	33,363	6,006	4,279
Interest Credit	0.92	14,611	2,632	4,017
Refund	0.52	8,032	1,446	2,337
Fee Charge	0.17	2,896	522	3,640

Loan EMI and Transfer alone drive ~55% of total value. Fee rate is flat at 0.15–0.17% across every type regardless of amount or risk.

6. Total Amount by Gender (Donut Chart)

- Female: ₹23.60 Cr (51.7%)
 - Male: ₹22.02 Cr (48.3%)
- Near-even split — gender isn't a strong differentiator on its own.
